

# *SheBuildsChennai Hack*

Code & Challenge 3.0

Team Name : **Team LogicX**

SDG Goal chosen : **SDG 8.7**

(Number + Name )

*Eradication of Human  
Trafficking and Modern  
Slavery*

**SDG 10**

*Reduce inequality  
within and among  
countries*

# Problem Statement

The Growing Threat of Fake Job Scams & Cyber-Slavery during migration

**“Every fake job offer can become a trafficking trap”**

1.2L+ targeted in fake job scams

₹22,845 Cr lost to cyber fraud

29,466 migrants never returned

1,500+ rescued from cyber slavery

Millions are at risk and existing solutions detect fraud too late.

# Solution

***Two Truths is a prevention-first platform that verifies job opportunities and identifies trafficking risks before migration occurs.***

- **Identifies fake job advertisements before users apply or travel.**
- **Provides a simple risk score and safety recommendations.**

## **How It Protects Migrants**

Verifies job offer authenticity  
Detects scam & trafficking red flags  
Generates an instant AI risk score  
Connects users to NGOs & reporting

# Technical Approach

1. User pastes or uploads a job offer (text or photo)
2. AI analyzes the job offer using OCR and a Red Flags database
- 3. Each matched flag adds to a risk score (max 100) LOW: 0–30 | MEDIUM: 31–60 | HIGH: 61–100
4. Flagged phrases shown to user with plain explanation of why each phrase is suspicious
5. User can connect to a nearby NGO or anonymously report the employer to a shared scam database

# Tech Stack

**React.js**  
Frontend interface

1.

**Node.js + Express**  
Backend API

2.

**Firebase Firestore**  
Database

3.

**Firebase Storage**  
Job offer photo uploads

4.

**Vercel**  
Frontend hosting

5.

**JavaScript**  
Single language, end to end

6.

# Dependencies and Showstopper

1.

## DEPENDENCY — Internet Connection

The app requires internet to check offers against the red flags database. Offline mode is not supported in the MVP version.

2.

## DEPENDENCY — Red Flags Database Quality

Accuracy of risk scores depends entirely on how complete and up-to-date the red flags database is. Requires ongoing manual curation by NGO partners.

3.

## SHOWSTOPPER — Low Adoption Risk

Migrant workers may not know the tool exists before they accept an offer. Solution: partner with recruitment agencies and NGOs to distribute the QR code link at point of job search.

4.

## SHOWSTOPPER — Language Barrier

If the job offer is in an unsupported language, pattern matching may miss red flags. Solution: prioritize top 3 migrant-worker languages in Phase 1 (English, Tagalog, Bahasa Indonesia)

# Feasibility & Viability

- ✓ **Lightweight Architecture**

Pattern-matching engine requires no ML infrastructure

- ✓ **Zero Installation Barrier**

Progressive web app accessible via QR code or link

- ✓ **Cost-Efficient Stack**

React + Firebase + Vercel infrastructure runs on free tiers for MVP

- ✓ **NGO-Ready Distribution Model**

QR-based deployment integrates directly into existing NGO and embassy outreach workflows

- ✓ **Network Effect Built In**

Crowd-sourced employer reporting improves detection accuracy with every submission

# Impacts & Benefits

## **Economic Impact**

Reduced scam-related financial losses

## **Social Impact**

Safer and informed migration decisions

## **Human Impact**

Reduced risk of human trafficking

## **Community Impact**

Crowdsourced scam intelligence

# MVP demonstration

# What makes Two Truths Unique?

## Prevention Before Exploitation

Detects trafficking risks before migrants travel, reducing the chances of exploitation.

## AI-Powered Risk Assessment

- Analyzes job offers and generates an instant risk score with clear explanations.

## Integrated Support Network

Connects users to trusted NGOs and enables scam reporting for immediate assistance.

## Community-Driven Intelligence

Crowdsourced scam reports continuously strengthen the red-flag database and improve detection.
